

MUFU

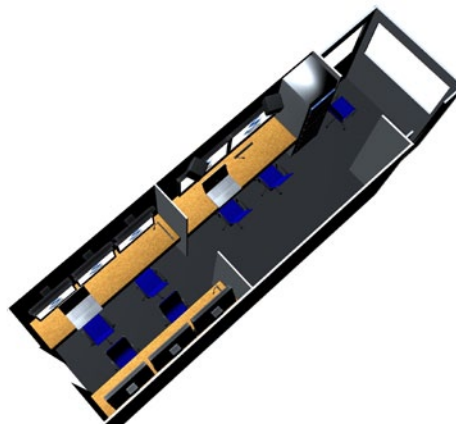

Multipurpose Vehicle

Vehicle Data	MUFU
Dimensions (l x w x h):	9,00 x 2,20 x 3,20m
Total weight:	5,50t
Power requirements:	16A CEE

The multi-function mobile TV SKYLINE can be used either as a production or 2nd production area, 2D and 3D. In addition, jobs for EVS, graphics or teleprompter operator to be established. Also a copy station with USB interfaces and an edit suite for industry events is regularly placed in the vehicle. Most recently, the vehicle has two networked Avid editing suites and therefore TV SKYLINE may offer the multi-function mobile also as a twin-section.

On two Apple Mac Pro computers running Media Composer with six or 15 GB of memory. As each processor is a 6-core Intel Xeon with 2 x 2.66 GHz. While one computer as an Avid Nitris I / O Interface, on the second system runs a KONA LHi card from AJA. Over several mxfsPEEDRAIL of MOG a parallel live ingest of six signals is possible. As a central server is an Avid ISIS 5000 with 32 TB of storage capacity, which equates to about 444 hours of footage in DNxHD format.

A third Avid Media Composer works as administrator system on the current Apple MacBook Pro. This enables the possibility of the central configuration of all devices via KVM and networking. In addition to managing the system the administrator can also read here about EB material without disturbing the interface. Of course, the Avids are also available separately to operate in the OB truck.
